

ROBIN WIDJAJA

Medan, North Sumatra, 20111, Indonesia | robinsalim@yahoo.com | [+6285101888201](tel:+6285101888201)

Profile

PMP-certified IT Project Manager & Product Leader with **10+ years** delivering web, mobile, and SaaS platforms across healthcare, adtech, gaming, and e-commerce. Combines **Agile leadership**, strong IT fundamentals, and **vibe coding practices**—using AI tools to speed up problem-solving and prototyping—to build scalable products. Proven results: **20% faster sprints**, **10 projects delivered on time**, and **15% budget savings**. Experienced in stakeholder management, API/platform integrations, AWS, and distributed teams. Give me a **Python or JavaScript app challenge**; I'll reply in **3 days**.

EXPERIENCE

IT Manager, Lanesborough Investments, Singapore

Jun 2023 — Present

Led Scrum meetings for SEO team, focusing on backlinking strategies, domain research, and competitor insights. Facilitated sprint meetings for development team, managing Jira tickets to optimize workflow. Monitored performance across various affiliate networks while generating daily reports for stakeholders.

Project Manager, INTNT.AI, Singapore

Dec 2022 — Jun 2023

Led project planning and operational execution for the development and deployment of an LLM-powered chatbot, ensuring alignment with business objectives. Managed sprint timelines and defined project scope while proactively identifying and mitigating risks using Agile methodologies. Coordinated cross-functional collaboration between developers, data scientists, and product owners to translate business requirements into technical objectives. Oversaw project documentation and implemented best practices for process optimization and workflow automation to enhance efficiency. Fostered a collaborative team environment, resolving blockers and facilitating effective problem-solving throughout development cycles.

Project Manager, Nesiagame, Medan

Jan 2015 — Jan 2020

Drove successful completion of 10 diverse projects, including games and applications, ensuring timely delivery and adherence to budget constraints. Fostered seamless collaboration across cross-functional teams, enhancing project execution through effective stakeholder communication and risk management. Built an engaged team culture by promoting accountability, scouting talent, and maintaining a sustainable office environment.

IT Support & Infrastructure (Intern), Sparkstation, Singapore

Jan 2012 — Apr 2012

Delivered technical support and infrastructure optimization in a leading Southeast Asian tech hub, enhancing operational efficiency. Managed client tickets, ensuring prompt issue resolution and effective communication with stakeholders. Deployed and configured Linux and Windows servers to align with business and security requirements, optimizing performance. Designed and maintained structured cabling systems to improve reliability and support organizational needs.

Freelance Web and Flash Developer, Self-Employed, Medan-Taiwan

May 2007 — Dec 2011

Engaged in client communication to gather requirements and translate them into technical solutions. Collaborated with clients to design and deliver functional, interactive websites across various platforms. Developed and customized websites using CSS, WordPress, Joomla, and built applications in PHP and MySQL.

KEY ACHIEVEMENTS

Delivery & Execution

- **Delivered 10+ complex projects on time and within scope**, spanning gaming platforms, SaaS products, mobile apps, hospital systems, and adtech solutions
- Led **end-to-end SDLC** across Waterfall, Scrum, Kanban, and Agile environments for both in-house and client-facing products

Efficiency & Cost Impact

- **Reduced sprint cycles by ~20%** through workflow optimization and tooling improvements
- Achieved **~15% budget savings** via disciplined resource allocation, risk management, and scope control

Product & Platform Leadership

- Conceptualized and scaled platforms such as **game system integrators**, **telemarketing systems**, **HR apps**, and **healthcare queue systems**, many expanded post-launch due to adoption and demand
- Led **API-heavy integrations** (payment gateways, WhatsApp, Twilio, BPJS, game providers) and SaaS-ready architectures supporting **high concurrency**

Technical & DevOps Oversight

- Hands-on experience overseeing **AWS infrastructure** (EC2, RDS, ElastiCache, monitoring CPU/memory/network) and deployment readiness
- Background in **full-stack development (MERN, PHP, Java, React, Node.js)** enabling strong translation between business and engineering teams

Stakeholder & Team Leadership

- Primary liaison for **clients ranging from startups to multinational companies**, including C-level stakeholders
- Built and led **distributed and hybrid teams**, including hiring, mentoring, and maintaining delivery morale during COVID-era remote work

Enablement & Training

- **Trained 200+ individuals** in public speaking, leadership, and platform usage as a Training Lead
- Frequently served as a **technical consultant** for marketing, HR, and operations teams beyond core PM responsibilities

Scrum Fundamentals Certified, SCRUMstudy - Accreditation Body for Scrum and Agile

Apr 2018

Credential ID : 622617

Red Hat Certified System Administrator (RHCSA), Red Hat

Jun 2016

<https://www.redhat.com/rhtapps/certification/verify?certId=120-093-406>

EDUCATION

Fu Jen Catholic University, Taipei

Bachelors degree, Aug 2016

- One term Leader of FJU Indonesian Student Association
- English Debate club member

Projects Details

BKKBoutique

Jan 2015 — Present

A digital transformation from a client who wanted to streamline their manual business flow for better engagement with the customers and easier data analytics and compilation. The project has been expanded three times more from conception.

Botak Game

Jan 2015 — Present

Transform an obsolete Flash game into modern technology. The game has a lot of requirements for the backend and predetermined game rules, in which we decided to use microservice architecture so that one service won't be disturbing others while another service is being updated.

inGO Ads

Jun 2015 — Jan 2020

A platform where users can look at cinema schedules, news feeds, job boards, advertisements, local promos, and local events, while Admins can also curate the "posting" through the back office. Later expanded into PPOB with third-party payment gateway API integration, digital currency, discount voucher system, and blast promotions.

RSBT

Mar 2018 — Aug 2021

A local hospital wanted to modernize and simplify its patient waiting process. Therefore, they opted to make a self-register system in which users can self-register through their android device before coming to the hospital. After arriving at the hospital, patients can confirm their arrival and get a queue ticket from the QR code that they scanned when registering. The system also has a countdown timer when it's their turn to see the doctor, and after finishing the visit, they can also rate the service. Later it expanded with BPJS queue integration.

Telemarketing System

Aug 2020 — Aug 2022

The marketing team wanted to branch out to cold calling because of COVID, hence the telemarketing system is created to simplify relevant marketers so they can focus more on profit-making and get a better closing rate and customer retention. Using the likes of WhatsApp API, skype API, and Twilio API.

HRD App

Oct 2020 — Aug 2022

Due to COVID, all human resources were required to WFH with some occasional on-site visits, the app must be mobile-friendly with GPS coordinate integration with multiple locations and buffers, anti-fraud login with multiple credential checks, also future GA and payroll integration.

Game System Integrator

Mar 2018 — Present

System Integration framework that can be integrated with other game providers using APIs, with the ability to handle thousands of concurrent users at the same time, and tens of thousands of requests. The system also must be able to be cloned separately because it will be sold as SaaS for interested individuals.

Various Company Profile / Landing Page / Simple Fullstack Ap

Mar 2015 — Present

Some are one-off projects such as company profiles, people's portfolios, simple user management apps, inventory apps, landing pages, mini-games for digital marketing integration, etc.

SOME OTHER PROJECTS

CASHIER SYSTEM

Jan 2015 — Present

Clients who do business in fashion retail wanted to expand and automate their business process through a stock audit, customer database, and fast checkout. Clients also would like the system to be accessible from anywhere in the world.

SUPPLY CHAIN SYSTEM

Jan 2015 — Present

A computer distribution company (client) wanted to streamline and automate the business process of an existing flow. Clients asked for an end-to-end system where their business may flow smoothly and key performance indicators of each employee can be traced. Decided to make an online system for back admin and frontline (android) to automate existing business flow.

PHOTOGRAPHER MARKETPLACE SYSTEM

Jan 2015 — Present

A client which engages in photography services wanted to rebuild their marketplace so that their user can get professional photography services anywhere in the world. Users can also choose their own photos to be professionally edited, and compiled for them. The system also functions like automated birthday promotions, coded promotions, seasonal giveaways, new destinations, photo sharing, a rating system, a very robust and detailed accounting report, and freelance photographers from around the world can also register on their website.

TRADING SYSTEM

Jan 2015 — Present

A client who runs in the gold trading business wanted to make an O2O gold trading service where users can deposit cash and buy their gold online, and deposit it for saving or resell them online (speculate trading), or take their physical gold from a jeweler that cooperates with the client.

CODING PROJECTS

BARTERYUK

Feb 2020 — Dec 2020

An eCommerce system that allows the user (owner) to post their items online and exchange their item with another user's (bidder) item with a bid system. Whenever an owner's item gets a new bid from a new bidder, an automated email will be sent to the owner, so the owner can choose which bidder's item is fit to the owner's liking. An owner can also buy points to bump up (top list) their item as the top advertisement. Finished transactions can be rated for subsequent user trust levels. Admin can also ban users with low trust levels.

SKILLS

Project & Product Management	IT Project Management (PMP), Agile / Scrum / Kanban, SDLC Delivery, Risk, Scope & Budget Management
Technical & Platform Understanding	Full-Stack Fundamentals (MERN), API & System Integrations, Cloud Platforms (AWS), Python
