

ROBIN WIDJAJA

AI Solutions Architect & Technical Delivery Lead

PMP-certified · 10+ years SDLC · Designs and ships production software by architecting and directing agentic AI

Medan, Indonesia · robinsalim@yahoo.com · +62 851-0188-8201 · linkedin.com/in/robin-salim · github.com/linnrobin

PROFILE

I own software products end to end — architecture, technical decisions, quality, and delivery — using AI agents as leverage to accelerate implementation while I stay on system design and correctness. PMP-certified with 10+ years leading software delivery across healthcare, fintech, gaming, and ad-tech, including roles at Singapore-based companies.

Recently I've designed and shipped a portfolio of production-grade systems — an AI software-delivery platform, a clinic medical-records system, and a pharmacy ERP — with an emphasis on safe, auditable, scalable design. I decide what to build, choose the architecture, and make sure it ships correctly.

FLAGSHIP — INDEPENDENT AI SYSTEMS (DESIGNED & DIRECTED)

AI software-delivery platform. Designed a self-modifying multi-agent system that writes and revises its own code under a four-layer safety controller (kill-switch, approval gate, protected-file boundaries, health checks) with a full audit trail for traceability. Owned the architecture, safety model, and evaluation. Actively deployed; Python / FastAPI.

Private AI model studio & evaluation. Built a private, on-demand LLM inference stack (open models on rented GPUs) and designed a deterministic evaluation framework — objective scorers, no LLM-judge — to benchmark fine-tuned domain models against leading commercial baselines on quality and cost. Owned the architecture and evaluation methodology.

Shared GPU control plane. Designed the job-routing and GPU-lifecycle infrastructure (queue, leasing, auto-recovery) that powers the systems above — built for reliability and cost efficiency.

PROFESSIONAL EXPERIENCE

IT & SEO Manager — Lanesborough Investments, Singapore (Remote) · Jun 2023 - Present

As IT & SEO Manager, own both architectural design and operations across development and SEO teams (Agile/Jira); design and run AWS, Cloudflare, and MongoDB Atlas infrastructure — monitoring, scalability, and stakeholder reporting.

Project Manager — INTNT.AI, Singapore (Remote) · Dec 2022 - Jun 2023

Led delivery of an LLM-powered chatbot, coordinating engineers, data scientists, and product owners across Singapore-based teams; owned scope, timeline, and risk.

Independent Software Developer (Freelance) — Medan · 2020 - 2022

Delivered client systems end to end, including a telemarketing platform (WhatsApp / Twilio / Skype API integrations) and a mobile HR app with GPS attendance and anti-fraud login — from requirements through deployment.

Project Manager — Nesiagame, Medan · Jan 2015 - Jan 2020

Delivered 10 game/application projects on time and within budget; built and led cross-functional teams. Earlier: IT Support & Infrastructure intern, Sparkstation, Singapore (2012); Freelance Web Developer, Indonesia/Taiwan (2007-2011).

VENTURES — PRODUCTS IN DEVELOPMENT (PRE-REVENUE)

Clinic medical-records system (EMR). A multi-tenant clinical platform covering patient registration, queue, consultation notes, ICD-10 diagnosis, prescriptions, pediatric growth charts, and billing, integrated with a paired pharmacy system. In pilot with a partner GP clinic (client: Dr. Will). Next.js / PostgreSQL.

Pharmacy ERP. Stock, dispensing, point-of-sale, and purchasing built on a first-expiry-first-out (FEFO) inventory engine, designed to scale across multiple outlets.

Real-time multi-game platform. A browser-based platform (lobby, wallet, accounts, live play) architected for expansion via partner APIs. Equity stake; technical lead.

QR-ordering SaaS for restaurants (FBQR). Architected a multi-tenant SaaS platform — QR menu & ordering, kitchen display, payment integration (Midtrans/QRIS), real-time order updates, and food-delivery-platform integrations (GrabFood / GoFood / ShopeeFood). In development.

Additional systems: a stock-market signal bot with a multi-agent validation panel; an AI image/video generation pipeline with per-character LoRA fine-tuning on FLUX for consistent, disclosed AI brand ambassadors; a DNS / subdomain-takeover security scanner (defensive infrastructure auditing across rotating CIDR ranges).

KEY ACHIEVEMENTS

- Independently architected and delivered production systems across AI infrastructure, healthcare, and real-time platforms — designing each system and directing AI to build it.
- Built safety and auditability controls for self-modifying AI (guardrails, approval gates, audit trails) from real failure-and-recovery experience.
- Delivered ~20% faster project cycles and ~15% cost savings through workflow optimization and disciplined scope/risk control.
- Led complex integrations (payment gateways, WhatsApp, Twilio, BPJS, game providers) and distributed teams through COVID-era remote delivery.

SKILLS

Core (hands-on, current): System & solution architecture · Multi-tenant SaaS architecture · Agentic AI orchestration & multi-agent design · Technical evaluation & QA of AI output · Data modeling · REST API & system integration · Cloud operations (AWS) · Security & auditability · Agile/Scrum/Kanban delivery (PMP) · HTML

Delivered with AI orchestration (architected & directed): Python · TypeScript / Next.js / React · Node.js · PostgreSQL · Docker · AI model fine-tuning & evaluation · GPU inference

Foundational (historical, 2007-2020): PHP/MySQL · JavaScript · MERN · Linux administration

CERTIFICATIONS

Project Management Professional (PMP) — Project Management Institute (2019, valid through 2028, Credly-verified)

RHCSA — Red Hat Certified System Administrator (2016)

Scrum Fundamentals Certified — SCRUMstudy (2018)

Full-Stack JavaScript Immersive — Hacktiv8 (2020)

EDUCATION

Bachelor's Degree, Computer Science — Fu Jen Catholic University, Taipei (2006-2010)

LANGUAGES

Bahasa Indonesia (native) · English — IELTS General Training 7.0 (L 7.0 · R 7.5 · W 6.5 · S 7.0, 2025) · Mandarin · Hokkien
